

Learning goal 1.5	<ul style="list-style-type: none"><li>• Student can justify theorems about angles, segments and their relationships</li></ul>
-------------------	-------------------------------------------------------------------------------------------------------------------------------

Student Checklist:

- I can identify and apply postulates to solve problems (vertical, addition, subtraction and substitution).
- I can give my answers in statement - reason form
- I can explain why vertical angles are congruent.
- I can organize my work into logical steps and processes

Extra skills:

- I can set up and solve algebraic equations using postulates.
- I can solve multiple step problems with reasoning that demonstrate my knowledge of postulates.
